

Plant Diversity

Directions:

1. Knowing the differences between plants in urban and agricultural settings provides a glimpse of plant diversity. To learn more, research and select five plants known to grow in both urban and agricultural settings.
2. Once you have selected five plants from both settings, research and find at least three interesting facts for each plant not included in the presentation.
3. With your facts, create a chart with a small illustration of each plant and the facts listed below.
4. Cite all sources used.
