

My Videography Kit

Directions:

You will be developing your ideal videography kit.

1. Consider the videography equipment you would want in your own videography gear kit. Research a variety of brands, products and features to get a better idea of what you would want and need.
2. Develop a list of equipment you want in order to create a full videography kit. Include the specific model and brand of each piece of equipment. Be sure to include each of the following:
 - Video cameras
 - Camera mounting devices
 - Lights and lighting accessories
 - Microphones and audio accessories
 - Camera lenses
 - Video storage devices
3. For each piece of equipment in your kit, explain the general functions of the equipment, why the piece of equipment is an essential part of your ideal videography kit and how you would use the equipment with the other equipment in your kit. In addition, for each piece of equipment, justify your brand and model choices.
