

Biosecurity Risks

Directions:

Answer the following questions.

1. Which of the following disease types can be transmitted between animals and humans?
 - A. Animal diseases
 - B. Zoonotic diseases
2. Match the transmission mode to its correct definition.

Aerosol	Occurs when an infected animal touches a healthy animal and the pathogen is transmitted, typically through a secretion
Direct Contact	Occurs when an inanimate object carries the pathogen until the object touches the animal and the pathogen infects the healthy animal
Fomite	Occurs when a healthy animal consumes contaminated food, water or dirt from its environment
Oral	Occurs when droplets in the air containing the pathogen are inhaled by a healthy animal
