

Diet Discovery

Directions:

1. Choose one livestock species and one game species which are known to inhabit the state in which you live.
2. Using digital or in-print resources, available at your local library or on the Internet, research the diets of each species.
3. Prepare a typed report which discusses the similarities and differences between the species' diets.
4. In the report make sure to include:
 - A. Any possible competition for food resources between the species.
 - B. How each species' diets may change throughout the year.
 - C. What factors may influence food selection by each species.
 - D. Citations for each source used.
