

Wood Types & Grades

Directions:

1. Your instructor will divide the class into five groups and assign each with a type of wood, grade or marking (hardwoods, softwoods, grades, markings or engineered lumber).
2. Using all available resources, research and discover when the wood type is typically used or how to identify the grade or marking.
3. Using the information, groups will create a Microsoft® PowerPoint® presentation to teach your classmates about the assigned type of wood, marking or grade. Be sure to use proper terminology and include any graphics or photos necessary.
4. Remember to include a citation slide listing all sources used.
5. Share your presentations with the class and be prepared to answer questions.
