

Website Features & Cost Analysis

Directions:

You will create a project by researching and comparing prices for at least five different website features from at least three different Web hosts.

1. You may choose the type of project you will create, however the project must include prices for Web hosting, registration and search engine optimization. At least two other features should be researched and included in the project.
2. A summary of the prices and features found should be included and you should indicate your choice in Web hosts according to price and features available.
