

Recycling Materials Used in Welding

Directions:

1. Your instructor will select a location in the shop where a material recycling bin can be safely placed.
2. Place all welding materials (scraps, electrodes, rejects, etc.), which can be recycled, into the bin.
3. Actively gather and place materials in the recycling bin for the length of the *Welding Shop Safety* lesson.
4. On the last day of the lesson, separate the materials by type (copper wire, aluminum, steel, etc.) and weigh each type of material.
5. Contact a local recycling facility and arrange a time to deliver what has been collected.
6. Participate in a class discussion to share your opinions on recycling welding waste.
